

Home Health

Receiving the medical care you need doesn't have to mean leaving your home. Our multi-disciplinary team provides professional and high quality services in the comfort of your own home. Home Health care helps people remain safely at home and live as independently as possible at home during recovery from surgery, injury, illness, managing a serious or chronic disease or dealing with multiple diagnoses.

Specialty Programs:

- Palliative Care
- Heart Failure
- COPD
- Fall Reduction

Hospital

Independence for Home-Bound Individuals

South Peninsula Hospital Home Health is a network of programs designed to meet the needs of elderly and disabled home-bound individuals choosing to remain at home in their community.

Our goal is to help clients become independent in their homes by providing:

- Disease process education/teaching
- Wound care
- Ostomy care
- Observation and assessment
- Medication management

Home Health Services

We work closely with each client, their family, physicians and other agencies to provide an individualized care plan for people of all ages. Based on each client's care plan, we provide intermittent skilled services as prescribed by their physicians.

Our services include:

- Skilled nursing care
- Physical therapy
- Speech therapy
- Occupational therapy

Skilled nursing:

- Wound care
- Medication management
- Disease education/teaching
- Caregiver training

Physical therapy:

- Home exercise programs
- Fall prevention
- Gait/transfer training
- Caregiver training
- Recommendation of durable medical equipment

Occupational therapy:

- Increase independence and improve daily life activities
- Improve quality of life through meaningful activities
- Adaptive equipment recommendations
- Environmental assessments
- Caregiver training

Speech therapy:

- Restore function in communication, cognition and swallowing difficulties
- Caregiver training

... and much more!
